Assessment (**Assessment on linkages with other clusters related to chemicals and waste management and options to coordinate and cooperate on areas of common interest, presented at SAICM/IP.3/8**, October 2019) is **very well structured**.

As mentioned, it is considered an initial step.

I would like to share my thoughts, focused to the practical implementation on presented recommendations.

I think, that analysis could be more "deep", proposing some possible scenarios to do that.

- To add to analysis means of reporting by each MEA (with issues and data requested by national authorities) and/or
- nationally, to establish "data bank", by collecting all reports to different MEA Secretariats and other authorities, related waste and chemicals.

I think that these exercises will open some overlapping and possible gaps, in data and human capacities.

Looking forward to future correspondence

Best regards
